Goal

Application software engineer with R&D experience in software and firmware development for scientific devices with active open source community participation is seeking for a full time position in application development. The most recent work experience is related to Atomic Force Microscopy, semiconductor Kelvin analysis, Raman TERS imaging, electrochemistry, actuators control.

Areas of expertise

Programming: Crossplatform, embedded programming, realtime algorithms, RTOS, embedded scripting
AFM: Contact, semicontact, Kelvin, MFM, PFM

Math: 2d/3d geometry, computer vision, machine learning, statistics, image processing
Raman: Confocal Raman, coupled mapping, TERS imaging

Technical proficiencies

Programming: C, C++, Java, microcontroller assembler
Platforms: Linux, Windows, ChibiOs, FreeRTOS
Frameworks: Qt, Boost, Swing, WxWidgets

Scripting: Lua, Ruby, Python, Maxima, SQL, R, Shell scripting

Web technologies: Ruby-on-rails4, Javascript, Bootstrap

Various: PCB design, Spice simulation, hardware debugging, mature soldering skill

Microcontroller series: ST Cortex-M; Atmel AVR8; Analog Devices Shark DSP, NXP ARM7TDMI

Prototyping: Capable to rapidly prototype electromechanical software and/or firmware controlled solutions

Most recent work experience

Aist-NT Inc.

Novato, CA

Software Engineer

- Created and maintained main AFM software.
- Created specialized software for Kelvin mode semiconductor surface analysis.
- Designed scriptable GUI building framework and embedded real time scripting language for modes prototyping and customization.
- Created firmware for a number of devices, designed PCB for a few hardware solutions.
- Created WEB based software for warehouse keeping, production control, expenses calculation, market forecasting.

Transmag

Santa Rosa, CA

Contract

USB based BLDC motor controller's interface development.

- Designed GUI for BLDC motor setup and testing.
- Designed firmware for USB interaction and BLDC parameters read/write routines.
- Suggested USB part schematic design in order to provide reliable USB communication.

NT-Mdt

Moscow, Russia

Software engineer

Scanning probe microscope and auxiliary devices programming.

- Designed PCI driver and communication library for AFM controller. Created firmware, prototype soft for AFM controller.
- Improved firmware and created UI for thermocontroller.
- Designed UI and control algorithms for bipotentiostat coupled with AFM.

Education

Moscow Institute of Physics and Technology

Moscow, Russia

Master of Science in Applied Mathematics and Physics

- Most recent courses taken:** Circuits & Electronics, Machine learning, Autonomous navigation, Kalman filtering, SAAS, Statistics with R, Node.JS, Angular.JS, Booststrap, JavaScript.

Open source projects participation

grambo-pi.com: Created expandable stackable PCBs set for RaspberryPi computer for robot prototyping.

xonotic.org: Created Blend2map Blender3D to MAP exporter.

chibios.org: Submitted I2C slave mode driver, IWDG driver.

QtLua: Provided a patch making Object::connect() work in the same way as in Qt.

Gaw: Provided a patch fixing crashes with default configuration file for gaw waveform viewer.
